

# Tackwhite AMC 3 D

## Description

TACKWHITE AMC 3 D is an ultraremovable p.s. adhesive, based on acrylic microspheric polymers in water dispersion, properly modified with additives and wetting agents in order to have a very good wettability on any surface combined with a clean and long lasting removability.

## Application

TACKWHITE AMC 3 D is suitable for the production of removable and repositionable PVC labels. It is suitable for transfert or onto conventional coating methods such as Rotogravoure or Mayer rod.

# **Technical Specifications**

Method of analysis	MU	Standard
1. Total Solids 3. Brookfield Viscosity 25°C	% mPa.s	41±1 50 - 150 <sup>(1)</sup>
8. pH Solvents	рН	8.5 - 9.5 water
(1) No 1 RV; 50 RPM		

#### **Film properties**

Method of analysis	MU	Standard
11. Peel Adhesion on Steel	g/in	150 - 250
17. Rolling Ball Tack 22. Static Shear	cm h	10 - 20 not applicable

Average values; 22 $\pm$ 2 g/m<sup>2</sup> of dry adhesive on PET film 36  $\mu$ m

Mod. DT0104E - Tackwhite AMC 3 D Creation date: 30 Sep 2004 Revision: 6 Revision date: 20 Mar 2014

Above information is reliable, but does not constitute warranty.

TACKWHITE AMC 3 D may separate over time: this is typical for this type of adhesive. Mix before use: adhesive will readily redisperse with mild agitation. Check pH in open coating pans and adjust to 9,5 with ammonium hydroxide solution, if necessary. If the pH of the adhesive falls below 8.8 coagulation may occur. Air operated diaphragm pumps are recommended to pump adhesive. Avoid the use of high speed centrifugal or gear pumps. The recommended coat weight range is 15-20 g (dry)/m<sup>2</sup>.

# Packaging

The product is supplied in iron drums (200 kg); IBC containers (1000 kg).

#### Storing

TACKWHITE AMC 3 D must be stored at temperature between +5°C and +40°C, avoiding freezing conditions. Keep containers closed to maintain proper pH.

Use within 6 months from production date (unopened and in the original packaging).
